2. When the uninstall of the license server is complete click on Finder again then on the drop down menu Go --> Go to Folder.

3. A popup window will appear type:

/Users/**TYPE_YOUR_CURRENT_MAC_USER_HERE**/.ChaosGroup inside and press the Go button.

To see the user you are currently logged in on your Mac (the one you need to type above), go to System preferences -->Users & Groups.

4. After that just right click on the .ChaosGroup folder and select Move to Bin. Note the dot "." in front of Chaosgroup in the name, that means the folder is hidden. If it doesn't look the same as in the screenshot on your Mac simply select the column view (see the red arrow).

5. Now login to our website and download the latest version of the license server from the link below:

https://download.chaosgroup.com/?platform=47&product=48

When the download is complete double click the installation file (or right click and select Open if it shows a warning and you have only Ok button) click Next and then click on the Customize button, **uncheck the "Activate during installation" box**, leave everything else as it is. Continue the installation and if you see an error message click on the Ignore button. The installation will finish.

6. When the installation is finished open in your web browser http://localhost:30304 and refresh the page until you see the license server page. After that you'll need to login with the email associated with your licenses. You can either click on Online licensing and then on the Sign in button or simply click the blue Sign in link on the front page.

After you are successfully logged in you'll see your licenses listed on the license server page and be able to use V-Ray.
